

Our machines are designed for outdoor use. We only use galvanised steel plate, and join the parts by means of clamp riveting and screwing in order to keep the surface layer intact. Edges are bent down, joints and seams overlap and many parts are embossed in order to prevent water penetration. The most exposed joints are also sealed with rubber strips or silicone. The products in the L-LINE are designed for plants with seasonal operations.

KTFb

The bottom conveyor KTFb is adapted in terms of capacity to transport material from storage bins/silos or from another Skandia bottom conveyor to a Skandia belt & bucket elevator. When feeding from a storage bin/silo a raised inlet or side inlet is used that is self-regulating, which prevents overfilling.

STANDARD EQUIPMENT:

- > Motor with chain drive
- > Outlet for drive
- > Belt tensioner in tail end
- > Bottom clean out hatch in tail end
- > Guide rails for return chain
- > Permanently lubricated bearings
- > Chain of steel with flight of plastic

ACCESSORIES:

- > Inlet hopper/Self-regulating side inlet/Self-regulating raised inlet
- > Weather cover for motor
- > Direct-mounted gearbox motor with support frame
- Weather cover for gearbox motor
- > Pop up overloading flap/inspection hatch with safety switch
- > Connections, hoppers & valves for different needs
- > Chain with brush cleaning flight

Self-regulating side inlet.

Pop up overloading flap/inspection hatch with safety switch.
